Nguyen Hoang Nam

Fullstack / AI-Integrated Engineer

Contact information

Name	Nguyen Hoang Nam
Birth	01/06/2007
Phone	+84 335574737
Email	hnamhocit@gmail.com
Address	TP. HCM, Viet Nam
Profiles	https://hnamhocit.dev | github.com/hnamhocit

Overview

Full-stack Developer with hands-on experience building backend services, web applications, and cloud-native systems. Experienced in designing RESTful APIs, implementing authentication and authorization systems, and working with PostgreSQL, Redis, and edge computing technologies. Focused on backend architecture, system security, and scalable application development.

Work experience

01/2026 – Present

DEVMINI STUDIO

Full-stack Developer

- Collaborated with a cross-functional team to architect and build full-stack web applications and project modules from scratch.
- Designed scalable database schemas, implemented secure RESTful APIs, and integrated dynamic frontend interfaces to deliver seamless user experiences.
- Participated in code reviews, bug fixing, and continuous performance optimization following Agile methodologies.

01/2024 – 12/2025

FREELANCE

Freelance Backend Developer

- Developed and maintained backend APIs and server-side services for high-traffic game projects, including CapybaraGo and MiniWorld, using NestJS.
- Designed and optimized database queries supporting gameplay-related services and user authentication workflows.
- Conducted testing and debugging to improve service reliability and performance during live game events.

Education

09/2025 – Present

UNIVERSITY OF TRANSPORT HO CHI MINH CITY (UTH)
Major: Information Technology

Skills

Languages	TypeScript, JavaScript, C#, Python, SQL
Backend & API	NestJS, ASP.NET Core, Hono, RESTful API, WebSocket, Microservices, OAuth2 / OIDC
Frontend & Mobile	Next.js, React, Tailwind CSS, Flutter
Databases & Cloud/DevOps	PostgreSQL, Supabase, Redis, Cloudflare Edge/Workers, Docker
Tools & Practices	Git, CI/CD, OOP, Clean Architecture, RBAC, Multi-tenancy

Awards

05/2026

TOP 20 FINALIST – UFM LAUNCHPAD 50: BEYOND STARTUP
Link: https://shorturl.at/ewLct

- Pitched and presented **G-KITS Project** (Team GROWINGKIDS), an innovative agricultural solution combining upcycled by-products with a sustainable tree management platform.
- Demonstrated a strong product mindset and cross-functional teamwork by bridging the gap between technical execution and business strategy.

Projects

VNTEZ – IDENTITY & ACCESS MANAGEMENT (IAM) & EDGE PLATFORM
(08/2026 - Present)

Field	Details
Client	Independent SaaS Platform
Descriptions	Centralized IAM service and edge-computing console supporting OAuth2/OIDC authentication for multi-tenant applications (https://vntez-iam.vercel.app/ | https://workers-hub.hnamhocit.workers.dev/).
Team Size	1
Position	Backend / Edge Developer

Field	Details
Responsibilities	- Designed and implemented authentication and edge services using Hono and Cloudflare Workers. - Developed a centralized admin console with tenant registration and manual admin-approval workflows for client onboarding and content publishing. - Implemented Role-Based Access Control (RBAC), centralized authorization, and session management. - Integrated Supabase PostgreSQL for persistent identity and isolated tenant data.
Technology in use	- Frontend: Next.js, TypeScript, Tailwind CSS - Backend: Hono, Cloudflare Workers - Architecture/DB: Serverless Edge Computing, OAuth2 / OIDC, RBAC, Supabase (PostgreSQL)

E-COMMERCE PLATFORM

(08/2026 - Present)

Field	Details
Client	Personal Project
Descriptions	Comprehensive full-stack e-commerce solution with customer storefront and admin dashboard.
Team Size	1
Position	Full-stack Developer
Responsibilities	- Applied Clean Architecture principles in ASP.NET Core backend to ensure scalable and maintainable code. - Implemented secure checkout flows, real-time cart state management, and optimized product search queries using Redis. - Managed database migrations and versioning utilizing FluentMigrator.
Technology in use	- Frontend: Next.js, Tailwind CSS - Backend: ASP.NET Core (C#) - Architecture/DB: Clean Architecture, PostgreSQL, Redis (Caching), Docker, FluentMigrator
